WWW – Tutorial Unit 4 – WT 2010

1. Develop a simple Web application on the Google App engine that
   a. fetches a visitor’s e-mail address, a subject line, and a body message from an
      HTML form and
   b. sends an e-mail to that address using the Google App Engine mail API.
2. Develop a simple Web application on the Google App Engine that shows the Google
   user account of the page visitor if the visitor is currently logged in.
3. Develop a simple guestbook application on the Google App Engine. The entries
   should be written to the integrated database using a subclass of db.Model.
